JHawk6UsingMetrics – Documentation outlining how to get the best from JHawk and a list of the metrics implemented by JHawk with details of their calculation.. It also includes an introduction to the area of Java code metrics.	Yes	Yes	Yes	No

JHawk Licensing options

General notes

All JHawk licenses are for one year. This does not mean that the product will cease to work after one year. It means that for one year after you purchase your license you will receive any updates to the product free of charge. Before the year is completed you will be asked if you want to extend your license for another year – if you take up this offer then you will continue to receive updates for another year. If you do not take up the offer before the end of the year you will not receive any updates and if you wish to receive the latest copy of JHawk you will need to purchase a new license.

Academic licensees will receive free updates for 3 years.

If you purchase any of the licenses and elect to purchase a higher level license within 90 days then we will redeem the full cost of the original license against the new license. This does not apply to Academic licenses.

To find out more about licensing go to our website :
<http://www.virtualmachinery.com/jhawklicensing.htm>

Starter License

The Starter License is intended for users (students and IT professionals) who wish to explore the area of software metrics at a very low cost and includes the following –

- JHawk standalone application – this is an executable jar which provides a limited subset of the full JHawk functionality. It does not include any of the dashboard or filters functionality and only allows data to be exported in CSV format
- Documentation

Personal License

The Personal License is intended for users (students and IT professionals) who wish to explore the area of software metrics and includes the following –

- JHawk standalone application – this is an executable jar which provides the standard functionality.
- Sample code for creating new metrics.
- Full documentation

Professional License

As its name states the Professional License is intended for IT professionals who need a set of tools that allows them to generate information about the state of their code in their development environment, as part of their build process and over the lifetime of their development project. The Professional License is available at three levels – Single user, Site and Corporate – and includes the following elements -

- JHawk standalone application – this is an executable jar which provides the standard functionality.
- JHawk Command line jar – allows integration with build processes using tools like ANT etc
- JHawk Dataviewer – used to analyse code over time based on JHawk Metric Interchange files generated by the stand alone and Command Line versions of JHawk.
- JHawk Dataviewer Command Line Service – provides command line access to allow the creation of visualizations of JHawk Generated data
- Sample code for creating new metrics.
- Full documentation

The Single User license allows the licensed user to install a single copy of JHawk on a single computer.

The Site license allows allow users at a single physical location to install JHawk on their computers at that location

The Corporate license allows allow all users who are employed by a corporate body to install JHawk on any computers owned by the licensed Corporate body.

Consultancy License

For obvious reasons JHawk has proved popular with consultancy organisations large and small and we offer special license programs for consultants. These programs allow you to install our product on customer sites as part of your offering with a minimum of bureaucracy and some financial benefit to yourselves. Contact us at info@virtualmachinery.com with the word 'Consultancy' in the title of your message.

Academic License Program

The Academic license is a full commercial license at a reduced rate for recognised academic institutions.

Academic License

This is a full version of the JHawk product equivalent to the Professional Site license and including all of the JHawk elements that are part of that license. The Academic License can be used by all the researchers within a single research department.

To obtain an academic license you must use the following procedure –

1. Send an email to info@virtualmachinery.com with 'JHawk Academic License' in the title. This email is your license application and must include : -
 - Your name
 - The Academic institution that you are a staff member of and a link to its website that confirms your status at this institution
 - An email address connected to the Academic institution – this can be the email address of a full time staff member or the department to which they are attached. Since the Academic license is for all members of the academic department to which it is licensed, and lasts for 3 years, it may well outlast the email address of an individual student. We need an email address that will allow us to send updates over the 3 year period. If you have difficulties with this please contact us.
 - The identifying banner that you wish to see on the License. This is the text that identifies the institution to which JHawk is licensed. This can be up to 60 characters.
2. When we are satisfied that your details are correct we will send you an email with a link to the purchase code for the license. When you purchase this license you will not receive the JHawk application – simply a text file informing you that we will be sending you the application
3. When we see your payment go through we will then email you the license. This should take no longer than 10 working days.
